

Determining the firmware version for the AT-D868UV and AT-D878UV

Are you trying to find out which version of firmware is inside your radio? This application note will tell you how to determine the firmware version of the radio and the display.

Turn on the power to the radio and you should see a screen like this. Note the green buttons and the circular button.

Start by pressing the green (Menu) key. You should get the following screen:

Press the circular key multiple times to scroll until you get the following screen:

If you scroll down, you get the screen shown above. If you scroll up, then the Settings selection would be on the top of the screen and the screen will look slightly different.

Press green (Select) key once and you get the following screen:

Press the circular key multiple times to scroll until you get the following screen:

You can scroll up or down to get the above screen.

Press green (Select) key once and you get the following screen:

The Radio ID and Radio Name is based on the code plug that was in the radio at that time. Yours will be different

Press the circular key down until you see the following screen. Your radio might have a different frequency range. Notice for this radio the firmware version is 2.29_beta. Yours will probably be different.

While scrolling in this screen, you can get the following parameters:

Radio ID

Radio Name

Model Name

Frequency Range

Firmware Version

Hardware Version

Radio Data Version

Last Program Date

Picture Version

Language Version

SCT 3258 Firmware Version

You can scroll back up if you missed a parameter.
